# HARSH VANSJALIYA

**SOFTWARE DEVELOPER | FULL STACK DEVELOPER**

harshvansjaliya3@gmail.com | +91 79847 62533 | linkedin.com/in/harsh-vansjaliya-904825226 | github.com/Harsh6575

## SUMMARY

Full stack developer with close to 3 years of experience. Spent nearly two years at an algo-trading startup building trading dashboards in **Next.js and TypeScript**. Now at a service company, working across client projects: React frontends, **Node.js and PostgreSQL** backends, and automations in **HubSpot, n8n and Zapier**.

## WORK EXPERIENCE

**Software Developer** | Alite Projects, Vadodara December 2025 – Present

Service company building web apps and business automations for clients.

- Work on several client projects at once, handling frontend, backend and automation work in parallel.
- Frontends in **React, Next.js, TypeScript and MUI**.
- Backend features in Node.js and TypeScript with **Prisma, PostgreSQL and Redis**, shipped in **Docker**.
- CRM and workflow automations with **HubSpot, n8n and Zapier**.

**Software Developer** | AlgoAcharya, Ahmedabad September 2023 – May 2025

Fintech startup building algo-trading platforms for the Indian stock market.

- Shipped trading platform features in **Next.js, TypeScript and Tailwind CSS**.
- Wrote shared UI components; state lived in **Zustand** and **Redux Toolkit**.
- Connected **GraphQL APIs** for live market data; tuned refetch intervals so prices felt live.
- Added ESLint and Prettier to the codebase and refactored the dashboard so it loaded faster.
- Some trades fired on bad data. I worked with the backend team and wrote **Django** scripts to find where it came from.

## PROJECTS

**Tailor Track** *(In Progress)* | Next.js, Expo, Express, PostgreSQL, Redis Oct 2025 – Present

Shop management app for my family's tailoring business, in a Turborepo monorepo.

- **Next.js** web app, **Expo** mobile app and **Express** API sharing one set of **Zod** schemas.
- Multiple shops per account, owner and staff roles, and customer measurements in **Prisma + PostgreSQL**.
- Logging out kills the token right away (**JWT + Redis denylist**). Redis also does rate limiting; tokens live in cookies on web, SecureStore on mobile.
- **260+ API tests** (Vitest, Supertest). A **Jenkins** pipeline runs lint, typecheck, tests, build and Docker images, and **SonarQube** checks code quality.

**Shortify: URL Shortener** | GitHub | FastAPI, MongoDB, Redis, Docker

- 7-char codes from a **SHA-256** hash in **Base62**; the same long URL always gets the same link.
- Collisions are salted and re-hashed; a **MongoDB** unique index stops duplicate codes.
- 301 redirects read through a **Redis cache** (24h TTL), falling back to MongoDB via Motor.

**cooked: YouTube Roast App** | Next.js, Gemini API, SQLite, Docker

- Google sign-in with the read-only **YouTube scope (OAuth 2.0)**; access tokens refresh before they expire.
- **Gemini** output is checked with **Zod** before saving, with a fallback model when Gemini is overloaded.

**Margin: Reading Notes App** | Next.js, PostgreSQL, Drizzle ORM, Tiptap

- Notes, ideas, questions and books in one **PostgreSQL** model, linked by folders, topics and tags.
- Every server action validates input with **Zod** and checks each id belongs to the signed-in user.

## SKILLS

**Frontend & Mobile:** React.js, Next.js, TypeScript, Tailwind CSS, shadcn/ui, MUI, Zustand, Redux Toolkit, TanStack Query, React Native, Expo
**Backend:** Node.js (Express.js), FastAPI, REST APIs, GraphQL, Prisma, Drizzle ORM, Zod, JWT
**Databases:** PostgreSQL, MongoDB, Redis, SQLite
**DevOps & Tools:** Docker, Docker Compose, Jenkins, SonarQube, Turborepo, AWS (S3, EC2), Git
**Testing:** Vitest, Supertest, Jest, React Testing Library | **Automation:** HubSpot, n8n, Zapier
**Languages:** TypeScript, JavaScript, Python, Java, SQL

## EDUCATION

**B.E. Computer Engineering** | SVIT, Vasad (GTU, Gujarat) 2019 – 2023
